

ABSTRACT OF THE DISCLOSURE

The present invention relates to a method for detecting an overlap of scheduled recording times. In the method for detecting an overlap of scheduled recording times according to the present invention, if there exists any broadcasting program scheduled to record, scheduled recording times of the broadcasting programs reserved to record are corrected on the basis of calculated time correction data for channels. Then, it is determined whether the scheduled recording times of the broadcasting programs overlap. If the scheduled recording times of the broadcasting programs overlap, information on the overlap is reported to a user.
